DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 6/16/2008 has been entered. Claims 23-42 are pending. Claims 1-22 are cancelled.

Claims 23-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Huffman et al. (USPN 6,053,736; hereinafter Huffman) in view of Lin (USPN 6,478,581 B1), further in view of Darago et al. (USPN 6,170,014 B1; hereinafter Darago), still further in view of Salisbury "Web-Based Simulation Visualization using Java3D", still further in view of Ball et al. (US 6,085,273; hereinafter Ball).

This holding, incorporated herein, is maintained from the prior action for the cited claims as amended. Response to the applicant's remarks are provided below and incorporated herein.

Response to Arguments

Applicant's arguments filed 6/16/2008 have been fully considered but they are not persuasive. Newly added claims 23-42 have been added by Applicant to emphasize the feature of providing co-processor cards executing actual flight management system software. Applicant argues that this feature distinguishes over the prior art of record. Applicant also emphasizes that their specification supports this language since reference is made to DTTS and RACE cards

manufactured by Thales Training and Simulation Ltd. It is additionally noted by Applicant that these cards are known to execute actual flight management system software, and a detailed description of these cards is provided in US 6,085,273. The Examiner notes that Ball et al. (US 6,085,273) additionally teaches a multi-processor computer system. In light of applicant's admission that executing actual flight management software on a multi-processor system is known, and the teachings of Ball, it is the examiner's position that it would have been obvious to one of ordinary skill in the art to modify the simulation system described in the combination of Huffman, Lin, Darago, and Salisbury, by providing co-processor cards executing an actual flight management system software, in order to increase computing power such that more simulation data can be handled by the computer system at a faster rate, thereby allowing the simulation to more closely resemble a real flight experience.
